### #Mini-Project - Tableau - Course Overview

- An e-commerce website needs to analyze and visualize the order details of the sales received in the last month to present it to the board members for a quarterly meeting.
- In this case study, you will be provided with a dataset that contains information on the orders placed on their website in the last month.

You are going to perform the following actions:

1. Upload the dataset into Tableau
2. Visualize the dataset in different ways mentioned in the problem statement.
3. Backup the obtained data into csv files.
